Vacancy is still rising in Boston's multifamily market in early 2024 as below-average demand continues to weigh on rent growth. A relatively constrained supply side, however, means that Boston looks likely to emerge more quickly than many markets from this most recent cycle.

Demand in the market has slowed considerably from its breakneck mid-pandemic pace, with approximately 6,500 units absorbed in the past 12 months. This represents just over 2% of inventory, less than half the peak at the end of 2021 and well below the average of 3.4% that prevailed from 2015 to 2019. Absorption has been particularly strong in new developments across several types of submarkets, from the urbanized Somerville/Charlestown and East Boston/Chelsea submarkets to far-flung South Plymouth County and 495-South.

Overall, however, demand has been insufficient to fill the additional units delivered to the market. Supply growth outstripped absorption by about 1,700 units in 2023, and this imbalance is expected to increase by a further 1,000 units by midyear before reaching equilibrium. Thus, vacancy should continue rising from its current level of 5.7% to about 5.9% before a gradual decline begins in the second half of the year. The total increase from its trough in early 2022 could be as much as 180 basis points.

This performance is nevertheless relatively strong in comparison to national trends. Across the entire United States, vacancy has risen 300 basis points since 21Q3, a consequence of blistering supply growth in many of the Sun Belt markets that experienced such strong inmigration in 2020 and 2021. Boston's vacancy rate has traditionally hovered around 100 basis points below the national average, but the gap is now over 200 basis points and is forecast to remain there for some time.

Higher vacancy has been enough to slow year-overyear rent growth from nearly double digits in early 2022 to 1.7%. This far exceeds national rent growth of 0.7% and may be one reason why investment sales have also been resilient in Boston, bucking the national trend of tanking volumes. Sales in 2023 exceeded \$3.4 billion, above the 10-year average of \$3.2 billion, though still well below the \$5.1 billion recorded in 2021 and the \$4.6 billion in 2022.

Though interest rates have contributed to rising cap rates and a corresponding 14% dip in values that is in line with the national average, Boston has maintained liquidity, including the sale of five 5 Star properties in the middle of the year after only one traded in all of 2022. While cap rates likely have further to rise, Boston could continue to prove a comparatively attractive major market for multifamily investors.

At nearly 5.7%, the apartment vacancy rate in Boston is at its highest in over two years, a consequence of supply and demand normalizing after a tumultuous three-year period. While up substantially from its trough in 22Q1, this is not far from its 10-year average of 5.4% and approximately 200 basis points below the national figure of 7.7%.

Vacancy in Boston has historically remained below the national average, with the only exception in the past decade being the period between 20Q2 and 21Q2, when pandemic-driven migration out of major cities reached its apex. In the years prior to the pandemic, the gap averaged around 100 basis points, so Boston's current relative position is quite strong.

Vacancy is rising across market segments, though the impact appears to be asynchronous. At about 8.6%, vacancy at 4 & 5 Star properties is up over 200 basis points from early 2022 but is still well below its 2015-19 average of 10.1% and could already be near its peak. It is likely to fall back under 8% within the next 12 months as the construction pipeline dries up.

Meanwhile, vacancy at 3 Star properties has risen approximately 100 basis points since 21Q4 and now stands at 4.2%, above its 2015-19 average of 3.7%. It is expected to keep rising through the next two years, peaking near 5.5% in late 2025. While the vacancy gap between 3 Star properties and 4 & 5 Star properties has

typically been about 600 basis points, it is currently 440 and could narrow to 170 by the end of 2025.

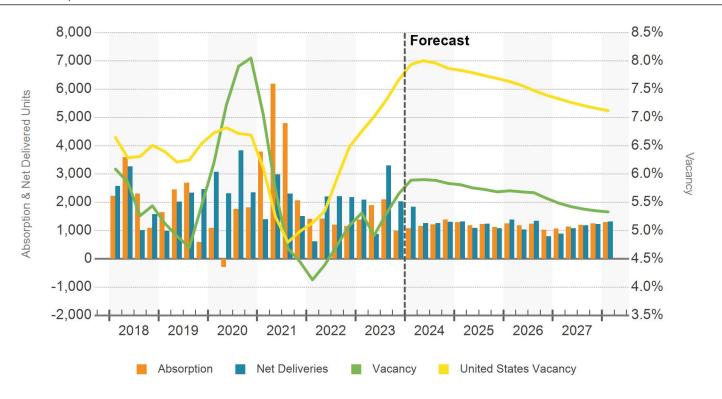

The 495-South Submarket, just north of Providence, Rhode Island, stands out for its recent strength of demand. Residents have absorbed over 7% of inventory in the past 12 months, best among Boston's submarkets. Vacancy is just under 7% as the market absorbs recently delivered supply, but an empty construction pipeline suggests this will continue to fall.

Closer to downtown, the East Boston/Chelsea has also attracted strong demand, with 12-month absorption of about 5% of inventory. While the new projects in this infill submarket have drawn interest, they have also come online at a time when residents are feeling the pinch of higher housing costs. Rent growth has been below the market average in both locations, with East Boston/Chelsea's rate of 0.8% representing one of the lowest in the metro. With the largest relative pipeline among Boston submarkets, rents look to be under pressure for some time.

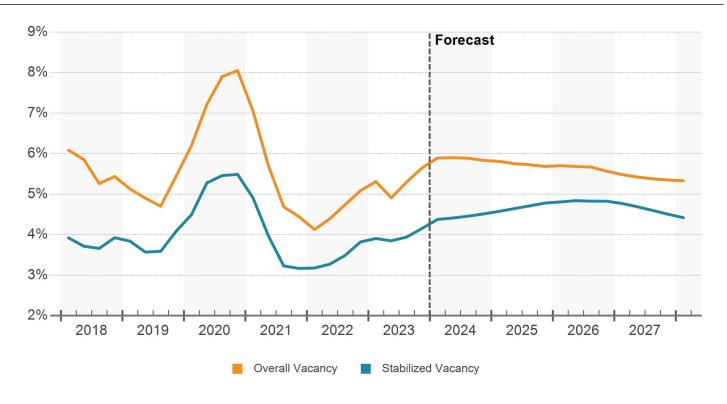

The general theme for the market is that, while it is not immune from the national economic forces that are slowing demand even as the last phase of the post-pandemic supply wave crashes, Boston's vacancy performance looks set to keep the market in its traditional position of strength among major markets.

VACANCY RATE

VACANCY BY BEDROOM

Currently at 1.7%, year-over-year asking rent growth has dipped well below the long-term average of 3% for the Boston metro. This is still above the national figure, however, which is now a mere 0.7%. It is also good enough to rank near the top among the country's top 25 multifamily markets, which is another sign of Boston's resilience. Both nationally and locally, rents are expected to continue decelerating through the first half of 2024 before the exhaustion of the supply pipeline helps to tighten the market later in the year.

Market rents in Boston are among the nation's highest, at \$2,780/month, trailing only a handful of metro areas in and around New York City and the San Francisco Bay. At this level, consistent annual growth around 3% is attractive to investors, even if the growth rate tends to trail the national average by 40-50 basis points. In the past decade, the only time rents have failed to grow was the 12-month period immediately after the onset of the COVID-19 pandemic, during which all major cities experienced accelerated migration away from their urban areas.

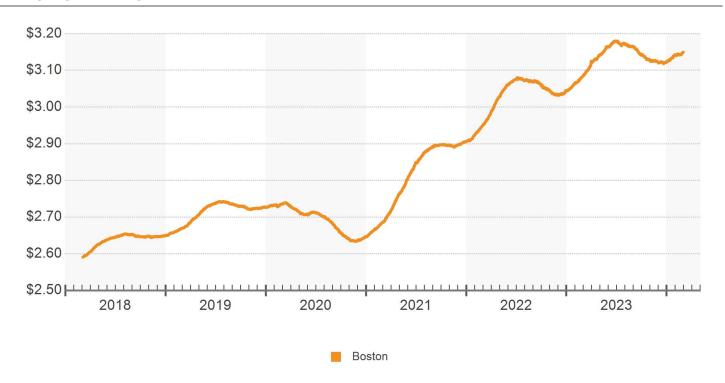

Rent growth has slowed more sharply at 4 & 5 Star properties since early 2022, a reflection of supply delivering while demand is still normalizing from its drop in 2020 and rapid snap back in 2021. The effect should continue, with growth at the top end of the market remaining below 2% until late 2024.

A selection of submarkets across the size spectrum have performed relatively strongly over the past year. In Lawrence/Haverhill, one of the largest apartment submarkets, year-over-year rent growth is still above 4%. Among other large submarkets, rents are growing at a year-over-year rate of about 5% in both close-in Brookline/Newton/Watertown and suburban Route 1 South.

Meanwhile, rent growth has been especially anemic along the South Shore, the only Boston submarket to see a year-over-year decline. Meanwhile, the South Boston/Seaport Submarket, which boasts the highest asking rents in the metro area, has also posted among the lowest growth rates at less than 1%.

Overall, Boston appears poised to maintain its place as a steadily performing major market, though observers are closely watching the political situation. Boston Mayor Michelle Wu recently persuaded the city council to recommend a rent stabilization program. Rent control has been prohibited by state law since 1994, and a ballot initiative to put the question directly to voters in 2024 failed in November. Market conditions have taken much of the sting out of higher-rent bills since the measure was initially put forward early in 2023, but several metroarea municipalities are pressing for its passage, which would be an unwelcome signal for market participants.

Expenses are estimated using NCREIF, IREM, and CoStar data using the narrowest possible geographical definition from Zip Code to region.

Boston's apartment supply growth has been consistent for nearly a decade but looks to slow in the coming years, with developers responding to rapidly rising interest rates and higher building costs by reducing construction starts.

Just over 8,400 new units delivered in 2023, about 3% of inventory and roughly in line with the long-term average. Only 5,700 units are expected in 2024, which would be the smallest figure since 2014 and only 2.0% of inventory. By comparison, the national apartment stock also grew by 3% last year and is forecast to grow about 2% this year.

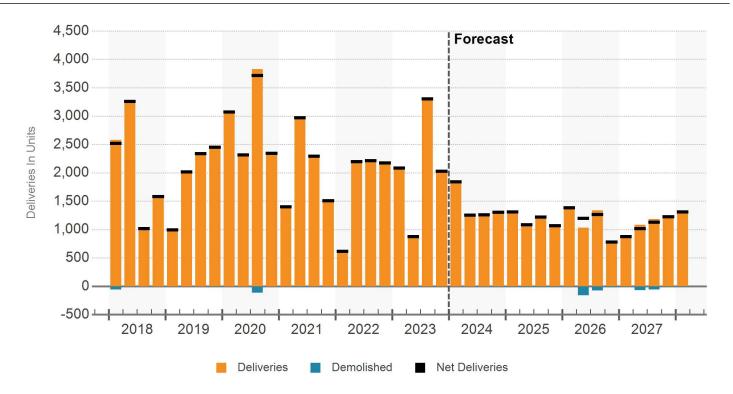

Boston also has 12,000 units under construction—just under 5% of inventory. This is in line with the national average but is well below the historical norm for the market. As a result, supply growth should be comparatively restrained for the next several years.

About a third of all units currently under construction are concentrated in three submarkets. The inner suburban area of Everett/Malden/Medford/Melrose has about 1,900 units under construction, representing nearly 17% of its

inventory, which is already among the largest in the metro. The adjacent East Boston/Chelsea Submarket currently has only about half the number of units, but with about 1,000 under construction, it will also be increasing its inventory by around 17%. To the southwest, Alston/Brighton has more than 1,100 units under construction, approximately 10% of inventory.

The quality composition of Boston's current pipeline is noteworthy. For the past decade, about 90% of new construction has been classified as 4 & 5 Star, with developers pursuing the premium rents commensurate with such projects. Now, however, 40% of the units under construction are in 3 Star properties. This reflects a broader trend, though it appears to have started later and advanced more quickly in Boston. Nationally, 4 & 5 Star properties have represented about 85% of new construction over the past decade. Since the end of 2020, however, this proportion has fallen and is currently around 72%. This could be a reflection of institutional players pausing new projects while waiting for interest rates to stabilize and for recently delivered premium units to be absorbed.

The multifamily investment sales market remained active in Boston in 2023, with volume holding steadier locally than nationally, but values declining similarly under pressure from higher interest rates and rising vacancy.

Over \$3.4 billion in sales volume closed during the year. While this was about 25% below the \$4.6 billion in 2022 and 33% below the record \$5.1 billion in 2021, it was approximately 3% above the average from 2015-19. This contrasts sharply with what has occurred nationally, where sales volume in 2023 was only about a third of its historically high level in 2021 and 2022 and 40% below its average in the late 2010s.

Asset pricing in Boston, however, is mirroring the national trend. With current market pricing at \$430,000 per unit, values are down around 15% from their peak in Boston, just as they are nationally. While cap rates in the metro are maintaining a spread approaching 100 basis points below national rates, both have risen approximately 100 basis points since early 2022 and are expected to rise by roughly another 60 basis points over the next 18 months. Both nationally and locally, pricing is expected to trough in early 2025 around 20-25% below its mid-2022 peak.

There has been some movement in both the buyer mix and the type of properties transacting recently. Public and institutional buyers were involved in sales accounting for 34% of transacted volume in 2023, the highest share since 2019 and up from 27% the prior year. Private buyers, on the other hand, were involved in about half of transacted volume, down from 60% in 2022.

One example of this trend is the December acquisition of One Upland in Norwood by the public REIT UDR, backed also by LaSalle Investment Management. The 4 Star, 262-unit property priced at \$436,260 per unit, about 10% above its prior sale price to the private REIT Cottonwood Residential in March of 2020. Even with the increase in value, the cap rate of 5.1% for a property with less than 4% vacant illustrates the pressure of rising interest rates on values.

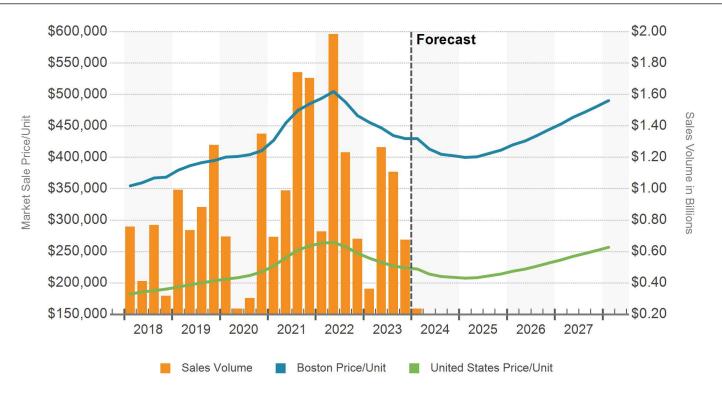

Another possible trend is the reemergence of premium properties in the capital markets. 5 Star properties were absent in all of 2022 and the first quarter of 2023, but three traded in the spring and summer of 2023, including The Val in Central Billerica. In September, Alliance Residential sold the 2021-vintage property for \$92.6 million, or \$438,000 per unit, to John M Corcoran & Co, a regional New England multifamily owner.

A recent 3 Star sale of note was Prynne Hills in the Outer Quincy/Milton/Randolph submarket, built in 2008. Blackstone sold the community to the Friedkin Property Group for \$143.5 million, or \$304,000 per unit, about 9% more than it paid when it acquired the property from AvalonBay in May of 2018.

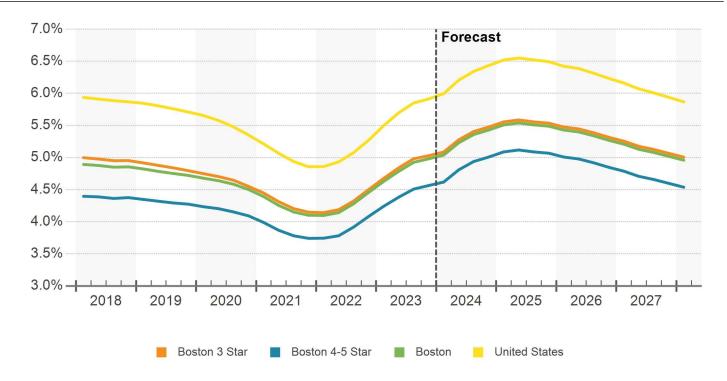

Both these sales are instances of major institutions exiting investments before the market bottoms, and in Blackstone's case, after several years of presumably strong income returns. As the bottom approaches, however, these opportunities will be more limited. If volume is to remain stable in the next 12 months, it will likely be accompanied by more downward movement in pricing.

Boston's economy has experienced faster growth than the overall U.S. economy for several years, driven by a highly educated workforce that supports the metro area's knowledge-oriented industries.

According to the Census Bureau's American Community Survey 2022, over 51% of adults in Boston aged 25 or older hold at least a bachelor's degree, and nearly 24% hold a graduate or professional degree. This makes Boston one of only six metropolitan areas with at least 1 million residents in which most adults have a bachelor's degree and one of only five in which more than a fifth have a graduate degree. Nationally, the percentages are 36.7% and 14.0%, respectively.

Because of this, the local economy is heavily weighted toward organizations operating in information, professional and business services, education and health services, and financial activities. This is evident in the list of the metro's largest employers, including healthcare systems Mass General, Beth Israel, and Dana-Farber; universities Harvard, MIT, Boston University, and Northeastern; and financial giants Fidelity, Mass Mutual, and John Hancock.

Advanced biotechnology research is a particular strength of the local economy, especially in Cambridge, which can lay claim to being the world's leading center for life sciences research and development. AstraZeneca, Moderna, Sanofi, Takeda, and Vertex Pharmaceuticals headline a long list of both established and emerging firms that helped Boston's economy grow by nearly 13% from 2017-21, compared to just over 9% for the U.S.

Despite the relative strength of the Boston economy, overall employment was hit harder by the pandemic than

the nation at large. It took a full three years for employment in the Boston metro to return to its February 2020 levels, which was about eight months longer than for the U.S. It has now recovered enough to match the nation's overall growth rate, though it still lags the accelerated pace of growth on display from 2016-20.

High-paying jobs are often associated with a high cost of living, and Boston is no exception. Apartment rents in Boston currently average \$2,700/month and are among the nation's highest, trailing only the metro areas in and around New York City and the San Francisco Bay Area. Similarly, house prices are much higher than the national average. According to the National Association of Realtors, the median sale price of an existing home in the Boston metro area was \$745,100 in 23Q3, 83% above the national mark of \$406,900. This figure placed Boston near the top, among markets on the East Coast.

Residents have enjoyed some small relative respite in inflation, however. From September 2021 to September 2023, consumer process rose a total of 11% in Boston, lower than the 12.2% rise that occurred nationally.

More broadly, Boston has endured less pronounced outmigration than other gateway markets and has avoided some of the rise in social problems that coincided with the pandemic, though opioid abuse is a glaring counterexample. Per capita overdose deaths in Massachusetts were 13.5% higher than the national average in 2021.

Looking ahead, the presence of vital industries, a capable labor force, and a generally high, if expensive, quality of life position Boston well for strong economic performance relative to the nation and peer markets.
