Boston's office market is feeling the full impact of the national post-pandemic downshift in demand in early 2024. A slowdown in the life sciences industry is undermining what had been a stable source of demand in the market. The result is greater exposure to the shrinking footprints of numerous organizations in technology, finance, and professional services. And all this is coinciding with a generational wave of new supply.

Office attendance remains low in Boston, just as it does nationwide. According to APTA, estimated ridership on the MBTA, the metro's public transit system, has struggled to reach 70% of pre-pandemic levels, trailing the national trend by about 10 percentage points. The consistently lower office attendance suggested by these figures is bringing space utilization into sharper focus for office-using organizations.

As a result, many of them are reducing their space requirements as leases executed before 2020 continue expiring. Collectively, occupiers have given back -2.3 million in the past 12 months, with more expected for the rest of this year and beyond. They have also put an unprecedented amount of space on the sublet market. This has contributed to an availability rate of 17.1%, an all-time high for the market.

Meanwhile, approximately 12 million SF—almost half of it intended for lab use—has come on line since the

beginning of 2022, with another 15 million SF expected by the end of 2025. This is by far the most in a similar period in the past 20 years and should contribute to rising vacancy and falling effective rents in the next 24 months.

Vacancy in Boston has trended below the national average for the past 15 years, and it remains so now, at 11.9%, versus 13.8% nationally. However, the spread has narrowed considerably since the end of 2019 and looks to narrow further in the coming months.

The imbalance in the occupancy market and uncertain future demand have interacted with the rapid 18-month rise in interest rates to send the capital markets into a deep freeze in Boston as elsewhere. Transaction volume in 2023 was the lowest amount since 2010, and this included a nine-figure lab portfolio sale just before the end of the year. The lack of liquidity makes true values difficult to determine, but they appear to be down around 20% on average since the end of 2021, with cap rates rising over 100 basis points.

With the rate-hiking cycle apparently near its end and a steady stream of loans maturing, liquidity should eventually return to the market. When it does, distress is likely to contribute to a repricing that is ultimately similar to the 30% decline that occurred in the aftermath of the Great Recession.

Annual Trends	12 Month	Historical Average	Forecast Average	Peak	When	Trough	When
Vacancy Change (YOY)	2.1%	9.0%	14.9%	12.4%	2004 Q1	2.9%	2000 Q2

After a biotech-led surge in 2021 and early 2022, lower leasing activity is now plaguing the Boston market, just as it is nationally. An estimated 11 million SF in new leases were executed during 2023, about 30% below the average from 2015-2019. This trend has been driven by smaller lease sizes, which have shrunk from an average of about 6,500 SF to less than 5,000 SF. Both these figures show that Boston is exceeding the national trend, which shows volume and lease sizes in 2023 to be around 15% below their pre-pandemic averages.

Tenants may be active in the market, but the net impact of this activity is a reduction in overall demand. Net absorption in the past 12 months has been -2.3 million SF, and the outlook is for millions more through the end of 2025. Many smaller tenants are now looking for space in the kind of prime buildings traditionally sought by major employers, but their needs fall far short of what would be required to backfill all the space vacated by those erstwhile occupiers.

Moreover, the largest leases of the past few months are consistent with the related trend of larger users reducing their footprints when their prior leases expire. LEGO's relocation from Enfield, CT to 1001 Boylston St. in Fenway is one example.. Another is Toast's sublease from LogMeIn at 333 Summer St. in the Seaport area, which constitutes a reduction of over 15,000 SF from the firm's current location at 401 Park Drive in Longwood. That property is now being repurposed for lab use by Alexandria Real Estate Equities, an ironic twist given that, as of March of this year, the LEGO and Toast deals are the only new non-lab leases greater than 100,000 SF in the market since the summer of 2023.

But the lab segment, which backstopped the market from 2020 through early 2022, now faces its own challenges. Since 2015, lab deals have been more than a third of those over 50,000 SF, including nearly half of those executed since 2020. There have been fewer such deals in recent months.

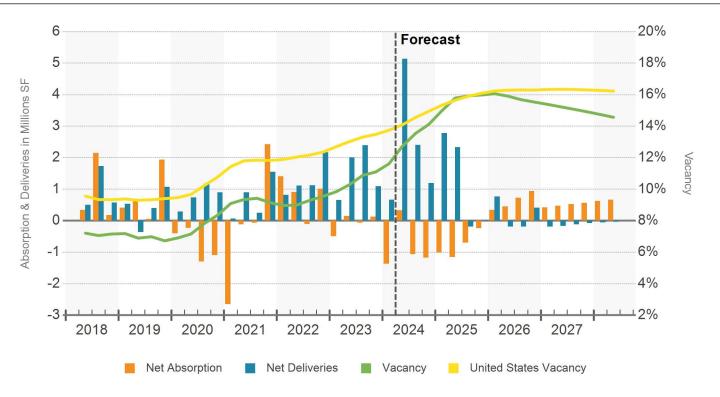

Two were executed in December, however, including Novo Nordisk's deal for 166,000 SF at Alexandria Real Estate Equities' Reservoir Woods East campus in Waltham, which is currently under renovation. Also in December, Foundation Medicine signed a full-building lease for 610,000 SF at 400 Summer St. in the Seaport, though they have since put about a quarter of the space on the sublet market.

Sublet availability generally has skyrocketed in the past four years, increasing by over 9 million SF—nearly triple the amount available at the end of 2019. The total of 13.9 million SF represents 3.5% of inventory, over 100 basis points above the national sublet availability rate.

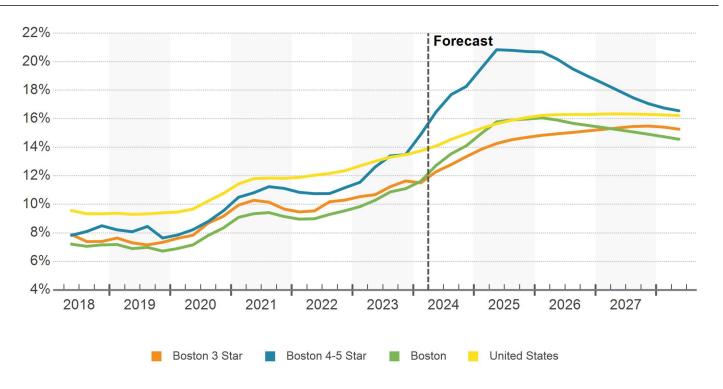

Softening demand has helped push the vacancy rate up to 11.9% from its pre-pandemic figure of 6.8%. While vacancy remains below the national average of 13.8%, the increase in sublease availability and a simultaneous surge in new supply have boosted availability to 17.1%, which exceeds the national average of 16.7%. At 4 & 5 Star properties, availability is now at a record 22.8%, up a staggering 1,000 basis points since the end of 2019. With neither demand nor supply pressure expected to subside in the months ahead, vacancy is forecast to peak above% by the beginning of 2026.

Renewal

Mirroring the national trend, rents in Boston have held flat in the 2020s, after rising steadily by about 4% per year over the previous decade. Following a brief wobble and recovery during the first year of the pandemic, the average market rent currently sits at \$42.00/SF, up less than \$1 since the end of 2019. Had this kept pace with headline CPI in the metro area, it would now be close to \$49/SF, or about 20% higher. This indicates that rents have fallen in real terms even as operating expenses have climbed along with consumer prices.

In addition to inflation, discounts and concession packages are also pushing effective rents downward, thereby eating into the value of leases. Market participants report that the gap between asking and taking rents, which had all but disappeared in the late 2010s, is now around 10%. They also say that offers of 12 months of free rent and a tenant improvement allowance above \$180 per SF are now available for a 10-year new lease for first-generation space. Such a package could represent about half of the total lease value over that term, as much as twice the impact of a typical concession package in 2019.

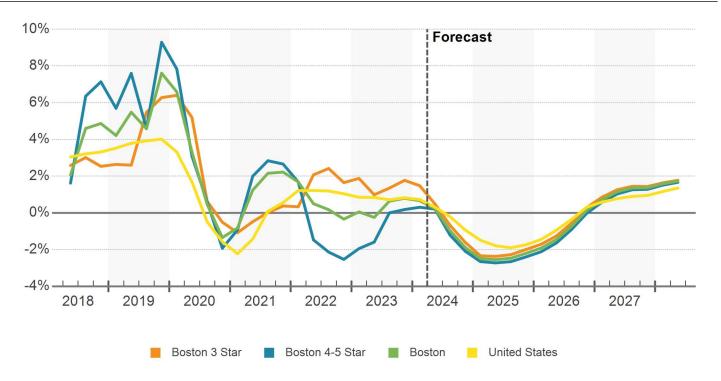

Rents remain highest in the major Cambridge life sciences clusters near Kendall and Harvard squares, around \$80/SF and \$70/SF, respectively. Here, too, they

have stagnated, just as they have in the city's traditional office nodes. The three major CBD submarkets—the Financial District, Back Bay, and Seaport—all have rents in the mid- to high-\$50s/SF range, and each is down \$1-2/SF over the past four years. The suburbs have fared somewhat better, with average market rents rising about 7% in the same period.

Given the softness of the occupancy market, the outlook for rent growth is poor. An overhang of new supply looms, as does a large amount of high-quality sublease inventory, which is typically available at discounts of 25-30% from direct rents. Growth prospects could worsen further as bargain-hunting investors begin to pick up distressed properties at a low enough basis to attack the leasing market with substantially reduced asking rents.

In light of these pressures, the CoStar house view is that market asking rents will begin to fall in early 2024 with the average declining to around \$40/SF by early 2026. This would be about 2% below their current level, a slightly smaller dip than what is forecast nationally over the same period. The decline looks to be closer to 5% among 4 & 5 Star properties, which will be contending with several new competitors that have been and will be delivered.

Expenses are estimated using NCREIF, Trepp, IREM, and CoStar data using the narrowest possible geographical definition from Zip Code to region.

Amid faltering demand for office space, Boston now faces a historic wave of new supply. The 5.8 million SF delivered in 2022 set a 20-year record for annual supply growth. That record was short-lived, however, with 6.2 million new SF coming on line in 2023. A whopping 9.9 million is expected in 2024, followed by another 5.7 million in 2025.

In absolute terms, Boston's construction pipeline of 16.5 million SF is the largest in the country. The total represents 4.4% of inventory, more than three times the national average of 1.2%. Among major markets, this trails only Austin, Texas.

On the net, over 25 million new SF will have been added between 2022 and 2025, assuming current projects are completed as scheduled, increasing Boston's office inventory by nearly 7%. About 60% of this has been conceived as lab space, though market participants report that some speculative developments in submarkets such as Allston and Seaport, which are outside the more established life sciences clusters in Cambridge and Longwood and the burgeoning suburban hub of Waltham, will likely end up serving traditional office tenants. Even at 1001 Boylston St. in Longwood, most of the space has been leased to non-biotech companies in advance of its expected 2024Q2 delivery.

Though lab-oriented projects comprise an outsized share of new development, the largest delivery of 2023 was the high-profile One Congress. The 43-story, 1.3 million-SF tower at the edge of the Financial District was fully leased at delivery in September. It serves as the new headquarters of State Street, which relocated from a few blocks away. Another fully leased traditional office is

Amazon's forthcoming 707,000-SF location at 1 Boston Wharf Road, set to deliver at the end of 2024.

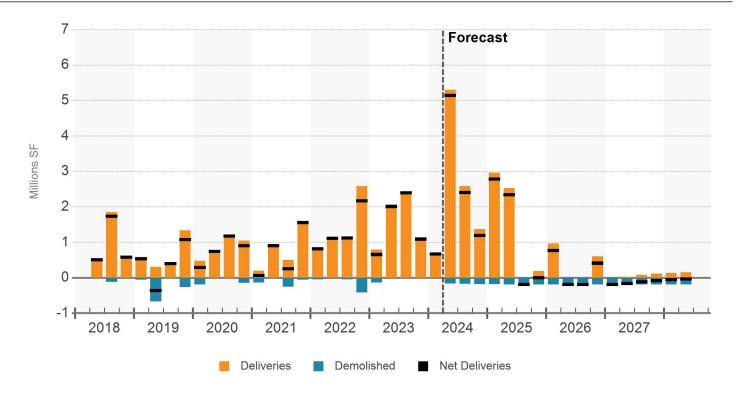

Some new office projects, however, are adding to the glut of availability. Millennium Partners' Winthrop Center at Downtown Crossing, completed in May of 2023, is the tallest building ever built in the Financial District. It is still over 35% available. The long-planned South Station Office Tower at 650 Atlantic Ave., scheduled for delivery in mid-2025, has recently begun marketing its 675,000 SF. An unleased 422,00-SF speculative lab development at 40 Thorndike St. illustrates receding demand among life sciences tenants, even in Cambridge.

Boston is one of a handful of major cities to put forward a concrete tax abatement program for public-sector support of office-to-residential conversions. As of the end of 2023, several proposals had been submitted, including one to transform 92,000 SF at the interconnected 85 Devonshire and 226 Washington St. in the heart of the Financial District into approximately 100 new apartment units. If approved and completed, such projects will have a meaningful impact at the neighborhood level, but they are likely to be too few and too small to alter market fundamentals.

It is a challenging time for any metro area to be experiencing a market-wide surge in speculative office supply, but that is precisely the situation Boston finds itself in as 2024 begins. Tenant preferences for new space should help upcoming deliveries stabilize, but the additional space will likely contribute to rising vacancy and falling rents.

Office investment sales activity shifted into slow motion in 2023, just two years after a record \$12.7 billion traded hands. The estimated total volume of \$2.9 billion was 80% below 2021's startling total and the least since 2010.

Fewer transactions and smaller deal sizes have contributed to the sharp pullback in activity. Only sixproperties transacted at values over \$100 million in 2023, with an average sale price of \$250 million among them. There were 10 deals over \$100 million in 2022, averaging \$377 million, while 2021 saw a staggering 29 nine-figure sales, at an average of \$319 million.

Despite the overall slowdown in the life sciences industry, labs have remained disproportionately represented in the investment sales market. They accounted for 72% of deals valued above \$100 million in 2021, 70% in 2022, and 83% last year.

A slight shift in buyer mix has coincided with the trend toward smaller deal sizes. Private buyers were involved in 73% of transactions in 2021 and 2022, but that figure rose to 84% in 2023. Not all sales to private buyers have been small, however, The year closed with major lab REIT Alexandria Real Estate Equities selling a two-building portfolio to San Diego's Phase 3 Real Estate Partners. With a combined value of nearly \$350 million, the deal was one of the largest of the year. One of the buildings, in the suburban submarket of Waltham, was priced at \$561/SF; the other, in Cambridge, was valued at \$992/SF even though it was more than 50% vacant at the time of sale.

Institutional buyers have not been entirely absent, however. In November, Norges Bank Investement

Management acquired a stake in Boston Properties' twobuilding lab portfolio at 290 and 300 Binney St. in Cambridge at an average valuation of about \$2,000 per SF. This is only slightly off recent peak pricing for labs, underscoring the value of this specialty property type when leased long-term to quality tenants.

The national trend since mid-2022 of users representing an increasing share of buyers has not yet appeared in Boston. Space users were invovled in only 10% of transactions in 2023, comparable to their share in 2021 and 2022.

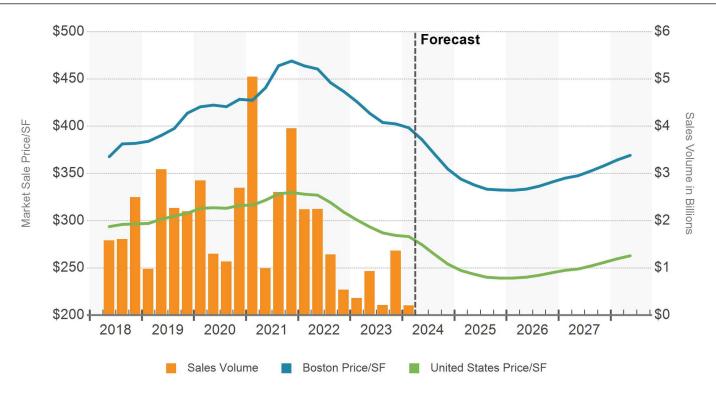

Aside from labs and the few stabilized single-tenant office deals where future income is supported with contractual rent increases, recent office deals appear to be heavily driven by discounts. For multi-tenant office assets where future income is uncertain, buyers in the market are putting less weight on going-in yields, instead prioritizing "price per pound" and higher unlevered internal rates of return.

A recent example of this heavy discounting is Synergy Boston's acquisition of 179 Lincoln St. in March 2024. By assuming the remaining \$76.5 million loan on the 82% leased, 221,474-SF property near South Station, Synergy effectively acquired it for roughly half what Blackstone had paid in January 2020.

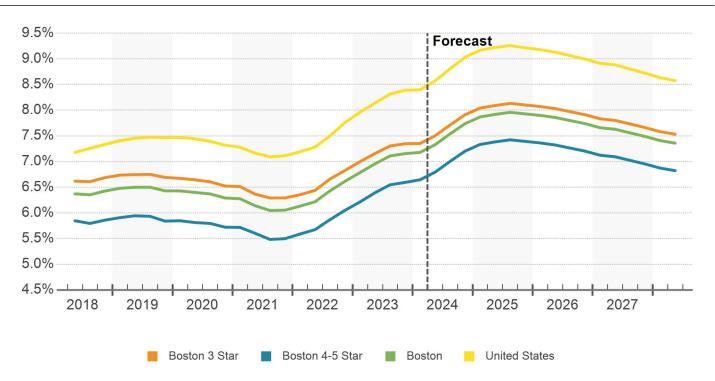

Moving further into 2024, Boston's troubled office market may continue to see well-heeled, low-leverage investors buying up discounted assets. For other buyers, intensive capital requirements could limit what buyers will be willing to pay for office properties, even for promising repositionings, and despite the apparent end to the rate-hiking cycle.

Boston's economy has experienced faster growth than the overall U.S. economy for several years, driven by a highly educated workforce that supports the metro area's knowledge-oriented industries.

According to the Census Bureau's American Community Survey 2022, over 51% of adults in Boston aged 25 or older hold at least a bachelor's degree, and nearly 24% hold a graduate or professional degree. This makes Boston one of only six metropolitan areas with at least 1 million residents in which most adults have a bachelor's degree and one of only five in which more than a fifth have a graduate degree. Nationally, the percentages are 36.7% and 14.0%, respectively.

Because of this, the local economy is heavily weighted toward organizations operating in information, professional and business services, education and health services, and financial activities. This is evident in the list of the metro's largest employers, including healthcare systems Mass General, Beth Israel, and Dana-Farber; universities Harvard, MIT, Boston University, and Northeastern; and financial giants Fidelity, Mass Mutual, and John Hancock.

Advanced biotechnology research is a particular strength of the local economy, especially in Cambridge, which can lay claim to being the world's leading center for life sciences research and development. AstraZeneca, Moderna, Sanofi, Takeda, and Vertex Pharmaceuticals headline a long list of both established and emerging firms that helped Boston's economy grow by over116% from 2017-21, compared to about 11% for the U.S.

Despite the relative strength of the Boston economy,

overall employment was hit harder by the pandemic than the nation at large. As of February 2024, total employment in the Boston metro area was still about 1% below where it was four years earlier, while nationally it was 3.6% higher.

Boston is also among the national leaders in cost of living. Local apartment rents currently average over \$2,800/month and are among the nation's highest, trailing only the metro areas in and around New York City and the San Francisco Bay Area. Similarly, house prices are much higher than the national average. According to the National Association of Realtors, the median sale price of an existing home in the Boston metro area was \$714,000 at the end of 2023, 81% above the national mark of \$394,600. This figure placed Boston near the top among markets on the East Coast.

Residents have enjoyed some small relative respite in inflation, however. From January 2021 to January 2024, consumer process rose a total of 15% in Boston, lower than the 18% rise that occurred nationally.

More broadly, Boston has endured less pronounced outmigration than other gateway markets and has avoided some of the rise in social problems that coincided with the pandemic, though opioid abuse is a glaring counterexample. Per capita overdose deaths in Massachusetts were 13.5% higher than the national average in 2021.

Looking ahead, the presence of vital industries, a capable labor force, and a generally high, if expensive, quality of life position Boston well for strong economic performance relative to the nation and peer markets.
